

COOLSCULPTING

AT THE PLASTIC SURGERY GROUP

» CoolSculpting is now offered at The Plastic Surgery Group.

This state-of-the-art, FDA-approved technology, safely delivers precise control with cooling to target fat cells underneath the skin. This gentle and effective procedure works on the treated area to eliminate fat cells by freezing them through your body's own natural processes. They are eliminated over time.

In today's society there is a common misconception between weight loss and fat reduction. Let's clarify, they are not the same. When a person loses weight, the fat cells become smaller, however, the number of fat cells remain the same. So, conversely, when a person gains weight, those same fat cells will now become larger again. Frustrating, right? CoolSculpting can help with this problem. CoolSculpting will actually reduce the number of fat cells in the areas that are treated. So, when those stubborn fat cells are eliminated, the lasting results of CoolSculpting will be evident and, regardless of your weight, your clothes will fit and feel better.

Could you be a good candidate? The CoolSculpting procedure is best suited for those who suffer from unwanted or stubborn areas of fat that seem to be resistant to diet and exercise. This non-surgical option is an alternative to liposuction. Each treatment session is conducted in our comfortable office setting. There is no downtime and you are welcome to carry on with your normal day-to-day activities. Together, we will develop the most effective treatment plan for you. We offer three convenient locations throughout the tri-state. We look forward to assisting each patient in attaining their personal goals.
